Issues in Mental Hlth-Ind Stdy (191283)

Barbara Gottlieb

2016 Fall (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 5

This independent study course is offered to students who are enrolled in WGH 210 Fall 2. The course will supplement the themes and topics of WGH 210, including illness constructs, trauma, embodiment, pain and eating disorders with a mentored field and service learning experience. Students will be required to provide 20 hours of service to one of several local sites selected for their relevance to course themes (for example, a shelter, an psychiatric in-patient unit, a school-based clinic), maintain a structured portfolio of reflections and commentary based on field experiences and readings, and attend 2 mentoring sessions.

Course activities: Field placement, preparation of final portfolio.

Course note: Minimum enrollment 1 student

Course Prerequisites: WGH210 required (may be taken concurrently)

Requirements: **HSPH: WGH304**

2015 Fall (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 5

This independent study course is offered to students who are enrolled in WGH 210 Fall 2. The course will supplement the themes and topics of WGH 210, including illness constructs, trauma, embodiment, pain and eating disorders with a mentored field and service learning experience. Students will be required to provide 20 hours of service to one of several local sites selected for their relevance to course themes (for example, a shelter, an psychiatric in-patient unit, a school-based clinic), maintain a structured portfolio of reflections and commentary based on field experiences and readings, and attend 2 mentoring sessions.

Course activities: Field placement, preparation of final portfolio.

Course note: Minimum enrollment 1 student

Course Prerequisites: WGH210 required (may be taken concurrently)

Decision Analysis for Health and Medical Practices (191102)

Ankur Pandya

2016 Fall (2.5 Credits) **Schedule:** TR 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 165

This course is designed to introduce the student to the methods and growing range of applications of decision analysis and cost-effectiveness analysis in health technology assessment, medical and public health decision making, and health resource allocation. The objectives of the course are: (1) to provide a basic technical understanding of the methods used, (2) to give the student an appreciation of the practical problems in applying these methods to the evaluation of clinical interventions and public health policies, and (3) to give the student an appreciation of the uses and limitations of these methods in decision making at the individual, organizational, and policy level both in developed and developing countries.

Course Note: Introductory economics is recommended but not required.

Course Prerequisites: BST200 or BST201 or BST202&203 or BST206&207 or BST206&208 or BST206&209

(all courses may be taken concurrently)

Requirements: **HSPH: RDS280**

Economic Evaluation of Health Policy & Program Management (191104)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

This course features case studies in the application of health decision science to policymaking and program management at various levels of the health system. Both developed and developing country contexts will be covered. Topics include: [1] theoretical foundations of cost-effectiveness analysis (CEA); [2] controversies and limitations of CEA in practice; [3] design and implementation of tools and protocols for measurement and valuation of cost and benefit of health programs; [4] integration of evidence of economic value into strategic planning and resource allocation decisions, performance monitoring and program evaluation; [5] the role of evidence of economic value in the context of other stakeholder criteria and political motivations.

Course Prerequisites: Students must have taken RDS280 or RDS286. Prior coursework in Microeconomics is recommended.

Decision Theory (191105)

Instructor TBD

2015 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

Introduces the standard model of decision-making under uncertainty, its conceptual foundations, challenges, alternatives, and methodological issues arising from the application of these techniques to health issues. Topics include von Neumann-Morgenstern and multi-attribute utility theory, Bayesian statistical decision theory, stochastic dominance, the value of information, judgment under uncertainty and alternative models of probability and decision making (regret theory, prospect theory, generalized expected utility). Applications are to preferences for health and aggregation of preferences over time and across individuals.

Doctor of Public Health

Subject: Doctor of Public Health

Doctor of Public Health 200 Section: 1

Introduction to Qualitative Methods in Health Research (203335)

Emma-Louise Aveling

2017 Fall (2.5 Credits) **Schedule:** F 0945 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course will provide an introduction to applied qualitative methods in health research. It is aimed at those with an interest in health and healthcare research who have little or no experience of using qualitative research methods. The course is designed to enable students to critically design, conduct, interpret and evaluate qualitative research. Throughout, the emphasis will be on gaining and reflecting on practical experience of designing qualitative research projects and using core qualitative methods.

We will begin by considering the question 'why qualitative research?', reflecting on the epistemological assumptions underlying qualitative approaches and considering its potential role in health research. We will then explore the implications for designing and evaluating qualitative research projects, taking account of ethical considerations and the practical constraints of conducting research in diverse applied settings. The remaining sessions will focus on developing practical skills for conducting qualitative research: generating data through interviews, focus groups and observations, and analyzing qualitative data.

Limited number of places are open to non-DRPH students. This course satisfies the Qualitative Methods requirement for DrPH students.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

HSPH: Course Material Fee Tier	< $25
All: Cross Reg Availability	Not Available for Cross Registration

Doctor of Public Health 200 Section: 1

Introduction to Qualitative Methods in Health Research (203335)

Emma-Louise Aveling

2019 Fall (2.5 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course will provide an introduction to applied qualitative methods in health research. It is aimed at those with an interest in health and healthcare research who have little or no experience of using qualitative research methods. The course is designed to introduce students to fundamental questions, principles and skills relevant to the design, conduct and evaluation of qualitative research. Throughout, the emphasis will be on gaining and reflecting on *practical* experience of designing qualitative research projects and using

core qualitative methods.

We begin by considering the question 'why qualitative research?', reflecting on the philosophical foundations of qualitative approaches and considering the value of qualitative methodologies for health research. We explore the implications for designing and evaluating qualitative research projects, taking account of ethical considerations and the practical constraints of conducting research in diverse applied settings. The remaining sessions focus on developing practical skills for conducting qualitative research: generating data through interviews, focus groups and observations, and analysing qualitative data. As an introductory level course, it necessarily aims to cover a breadth of topics; it does not, therefore, provide in-depth, hands-on experience of any one aspect of qualitative data collection or analysis.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | DRPH - New Students

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/15/2019 01:00PM – 08/27/2019 11:59PM

Fundamental Concepts of Public Health (203339)

Claire Chaumont

2020 Summer (2.5 Credits) **Schedule:** TR 0800 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 10

This course is intended to equip the student with an understanding of the foundational concepts that will help to organize thinking and learning throughout the DrPH program. Teaching methods in this intensive one-month session will include thought papers, group exercises, interactive lectures, scholarly readings, and class discussion and debate. Many students will have prior exposure to the academic study of public health, but there is likely to be a wide range of backgrounds in terms of disciplinary training, approaches, and practical experience. This course is intended, in part, to provide students with a common language and set of conceptual frameworks to guide learning throughout the program.

Course Restricted: DrPH students only.

2017 Summer (2.5 Credits) **Schedule:** MTR 0130 PM - 0320 PM

W 0130 PM - 0530 PM

Instructor Permissions: None **Enrollment Cap:** 25

This 2.5 credit summer course satisfies the school-wide rquirements for epidemiology for students in the Doctor of Public Health program.

At the conclusion of this course, students will have gained a solid understanding of basic principles and methods of epidemiology; learned how to apply these principles and methods to the evaluation of relevant public health questions; and developed the ability to critically analyze the epidemiologic and public health literature. Class sessions will compromise of lectures, seminars, and in-class exercises.

2017 Summer (2.5 Credits) **Schedule:** TR 0900 AM - 1200 PM

Instructor Permissions: None **Enrollment Cap:** 24

Covers basic biostatistical techniques with applications in public health. Topics include data presentation, elements of probability, the normal and binomial distributions, estimation and hypothesis testing, sample size and power, nonparametric methods, and contingency table analysis. The course will provide students

with the skills necessary to perform basic data analyses and to critically interpret statistical issues related to study design and analysis in the public health literature. Applications to public health policy and health care management.

This course is designed to provide DrPH students with a strong foundation in basic principles and methods of biostatistics and the opportunity to practice applying these principles and methods to the evaluation of relevant public health questions and to critiques of public health literature. Completion of this course, together with DRPH 204: Regression Methods for Public Health Leaders, will satisfy the School's introductory biostatistics course requirement.

This course will include a combination of teaching modalities, including a blended format in which students will review pre-recorded videos to gain exposure to new concepts. This will be supplemented by in-class lecture material to emphasize important points and to introduce some additional concepts, details, and computing skills. A key component of this course will be the integration of computing in Stata, simulations, data analysis exercises, and study critiques into the main class sessions, including some group activities. These exercises are designed not only to teach principles and methods of basic biostatistics through a hands-on approach but also to give DrPH students opportunities to work together and understand how their various skills sets can be used in concert to apply biostatistical principles to public health problems.

Limited to DrPH Students

Requirements: **HSPH: DRPH203**

David Wypij

2017 Summer (2.5 Credits) **Schedule:** TR 0900 AM - 1200 PM

Instructor Permissions: None **Enrollment Cap:** 25

Focuses on regression methods with appliucations in public health. Topics include correlation, linear regression, properties of estimators, multiple linear regression, regression diagnostics, confounding and effect modification, model building and model selection, model assessment, and logistic regression. The course will provide students with the skills necessary to perform regression analyses and to critically interpret statistical issues related to study design and analysis in the public health literature. Applications to public health policy, health care management, and econometrics.

This course is designed to provide DrPH students with a strong foundation in linear and logistic regression and the opportunity to practice applying regression methods to the evaluation of relevant public health questions and to critiques of public health literature. Completion of this course, together with DrPH 203: Biostatistics for Public Health Leaders, will satisfy the School's introductory biostatistics course requirement.

Paradigms of Social Theory (190439)

Jason Silverstein

2018 Spring (5 Credits) **Schedule:** F 0200 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** 25

This course is designed as a required core seminar for DrPH students on socialtheory, complementing required coursework in economic theory and analysis. It presents a range of social scientific frameworks and lenses through which public health issues are filtered. It has two primary preoccupations. Firstly, the question of agency within the social world, a problem that is central to all social sciences and to the distinctions between them. Secondly, the relationship between power and knowledge, a problem of all sciences, and of public health, for which a critical social scientific perspective is often crucial. In this course, you will learn to distinguish and apply a variety of frameworks and methods from anthropology, sociology, and psychology. This will be done in three sections. The first introduces and contextualizes social science and its variants through exposure to the primary texts of foundational theorists. In the second section, the focus is on methods - methods of research, but also methods of writing and of thinking. The final section takes up a range of contemporary topics and read work from a variety of

disciplines on this topic. The focus is on honing analytical skills to critique arguments in terms of each other.

Course is restricted to DRPH students

Leadership in Public Health: Personal Mastery (203340)

Fawn Phelps

Cyra Dougherty

2020 Summer (2.5 Credits) **Schedule:** MWF 0830 AM - 1200 PM
MW 0100 PM - 0400 PM

Instructor Permissions: None **Enrollment Cap:** 15

The landscape of public health is deeply complex and rapidly changing. Public health leaders understand systemic problems, set new directions, lead change and learn quickly from mistakes. Public health leaders connect with and inspire others to join them in addressing the most intractable population health challenges. The transformational public health leader develops this capacity through an ongoing cycle of study, introspection and application.

Leadership development often requires the expansion or altering of a person's perception of self and of others. A person can change how they view themselves and how they view and engage with others through intensive personal and group experiences with time for reflection and learning. In this foundation course, you will:

1. Develop a greater understanding of yourself as a leader and a learner, including your strengths and challenges.
2. Grow your ability to understand, engage, and effectively support and challenge others; and,
3. Deepen your understanding and application of dialogue to build community.

Course Note: Course is restricted to DrPH students in the 1st year.

Requirements: **HSPH: DRPH 240**

Leadership in Public Health: Personal Mastery II (203721)

Fawn Phelps

Michael McCormack

2016 Fall (1.25 Credits) **Schedule:** T 1030 AM - 1220 PM

Instructor Permissions: None **Enrollment Cap:** 22

***Leadership in Public Health: Personal Mastery II* is the second installment in the foundation courses for the DrPH's leadership development curriculum. The DrPH leadership development programming is rooted in leadership theory and includes**
experiential and reflective exercises.

The landscape of public health is deeply complex and rapidly changing. Public health leaders understand systemic problems, set new directions, lead change and learn quickly from mistakes. Public health leaders connect with and inspire others to join them in addressing the most intractable population health challenges. The transformational public health leader develops this capacity through an ongoing cycle of study, introspection and application.

Leadership development often requires the expansion or altering of a person's perception of self and of others. A person can change how they view themselves and how they view and engage with others through intensive personal and group experiences with time for reflection and learning. Building on the Summer 1 Personal Mastery course, Personal Mastery II course guides students in examination of their current leadership practice and their intended leadership practice.

In this foundation course, you will:

1. Develop a greater understanding of yourself as a leader and a learner, including your strengths, preferences, growth edges, blind spots and limitations, which if not identified and addressed are likely to undermine your leadership and personal effectiveness. You will further develop your ability to overcome your gaps and

manage your limitations;

2. Further grow your ability to understand, engage, and effectively support and challenge others, including your DrPH colleagues; and,

3. Deepen your understanding of how to work in teams and support the development of your team members.

Prerequisite: DRPH240
Course Restricted to DRPH students

Enabling Teams (204256)

Predrag Stojicic

2020 Fall (2.5 Credits)

Schedule: MW 1130 AM - 0100 PM

Instructor Permissions: None

Enrollment Cap: 10

The DrPH Enabling Change program is premised on the belief that effective public health practitioners must augment traditional research skills and methodologies with learning how to enable positive change at four levels: within themselves, amongst their teams, inside their organizations, and across systems. This course is part two of that sequence; it is preceded by courses in personal mastery (DrPH 240) and communications (DrPH 260) and will be followed by a course on leading change in organizations, in systems, and through movements (DrPH 251).

Enabling Teams is included in recognition that in many public health organizations, teams have emerged as a preferred work arrangement. Under the right conditions, a team's capacity may exceed that of a similar number of individuals working autonomously when the specialized knowledge of team members can be effectively coordinated and leveraged by leadership. As the problems that communities face increase in scope and complexity, delivering change via teams is increasingly necessary.

The Enabling Teams course is also designed to help students prepare for their winter field immersion experience. Students will be introduced to a range of frameworks, models, empirical research, simulations, and case-based discussions, which are focused on collaborative decision-making and the effective use of teams and "teaming" to solve key problems. To aid students who are concurrently planning for their January field immersion experience, which they will engage as small working groups, this course will include "lab" sessions that will enable students to practice applying critical skills related to course concepts and competencies.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

augment traditional research skills and methodologies with learning how to enable positive change at four levels: within themselves, amongst their teams, inside their organizations, and across systems. This course is part two of that sequence; it is preceded by courses in personal mastery (DrPH 240 and 241) and will be followed by a course on leading change in organizations, in systems, and through movements.

Enabling Teams is included in recognition that in many public health organizations, teams have emerged as a preferred work arrangement. Under the right conditions, a team's capacity may exceed that of a similar number of individuals working autonomously when the specialized knowledge of team members can be effectively coordinated and leveraged by leadership. As the problems that communities face increase in scope and complexity, delivering change via teams is increasingly necessary.

The Enabling Teams course is also designed to help students prepare for their winter field immersion experience. Students will be introduced to a range of frameworks, models, empirical research, simulations, and case-based discussions, which are focused on collaborative decision-making and the effective use of teams and "teaming" to solve key problems. To aid students who are concurrently planning for their January field immersion experience, which they will engage as small working groups, this course will include four lab sessions that will enable students to practice applying critical skills related to course concepts and competencies.

Class Notes: **Lecture Meetings**

10/25 - Countway 403

11/1 - Countway 403

11/8 - DrPH Program Space

11/15 - Countway 403

11/22 - Countway 403

11/29 - Modell 100A

12/6 - Countway 403

12/13 - Modell 100A

Lab Meetings

11/8 - Countway 403

11/15, 11/29, 12/6 - Lab meetings in Kresge 202B

Requirements: **HSPH: DRPH 250**

Enabling Teams (204256)

Kimberlyn Leary

2018 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 10

The DrPH Enabling Change program is premised on the belief that effective public health practitioners must augment traditional research skills and methodologies with learning how to enable positive change at four levels: within themselves, amongst their teams, inside their organizations, and across systems. This course is part two of that sequence; it is preceded by courses in personal mastery (DrPH 240) and communications

(DrPH 260) and will be followed by a course on leading change in organizations, in systems, and through movements (DrPH 251).

Enabling Teams is included in recognition that in many public health organizations, teams have emerged as a preferred work arrangement. Under the right conditions, a team's capacity may exceed that of a similar number of individuals working autonomously when the specialized knowledge of team members can be effectively coordinated and leveraged by leadership. As the problems that communities face increase in scope and complexity, delivering change via teams is increasingly necessary.

The Enabling Teams course is also designed to help students prepare for their winter field immersion experience. Students will be introduced to a range of frameworks, models, empirical research, simulations, and case-based discussions, which are focused on collaborative decision-making and the effective use of teams and "teaming" to solve key problems. To aid students who are concurrently planning for their January field immersion experience, which they will engage as small working groups, this course will include "lab" sessions that will enable students to practice applying critical skills related to course concepts and competencies.

Enabling Large Scale Change (204462)

Fawn Phelps

Jocelyn Chu

Predrag Stojicic

2021 Spring (2.5 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 10

The Enabling Change program within the DrPH degree program is based on the belief that effective, applied, public health practitioners must be able to enable positive change within themselves, amongst their teams, inside their organizations, and across systems. For those preparing to work at scale, what applied skills, learning trajectories, frameworks, and mindsets are needed to identify synergies, foster multi-party collaborations, and coordinate work within an organization, across systems, and across sectors? How do individual actors orient themselves to this work, especially where the scale of the endeavor requires complex partnerships among entities who may evaluate success in different ways and where work typically unfolds over a long time (possibly exceeding an individual career or even life span)?

This course enables DrPH students to engage with senior leaders who have led significant large-scale efforts. Each session will focus on a tripartite model of exploring a significant, complex problem (institutional transformation or achieving health equity), relevant management and performance tools (i.e. strategic planning and implementation, budget and regulatory processes, or engaging multi-stakeholder coalitions), and the leader's reflections on operating wisely (and learning from mistakes) in the context of "wicked problems." The course will also allow DrPH students to draw lessons from their own leadership engagements during the January Field Immersion. Finally, students will be introduced to a portfolio of approaches that take into account the intersection of policy and politics. For example, students will learn how to prepare for and engage in a simulated press conference and workshop personal branding and digital communications strategies.

Course Objectives

At the end of this course, students will be able to:

- Refine personal leadership agendas and identify skill areas to shape their progression in the DrPH program, including towards their summer Field Immersion experiences.

- Integrate the synergistic efforts of the public, professionals, policymakers, and other key constituents in driving large-scale change health issues, utilizing scientific evidence, stakeholder input, public opinion data, and other key sources of information.

- Identify pathways by which individuals drive large-scale change efforts within organizations, across coalitions of organizations, and across sectors. Apply strategies towards consensus/resolution in multi-stakeholder settings and alternatives where agreement currently cannot be fostered.

- Apply media, management strategies, and administrative tools to address public health and healthcare challenges.

No auditing.

Requirements: **Restricted to DRPH students in year 1**

Team Based Field Immersion: Dynamics of Teams in Systems (Winter Term) (212826)

Jocelyn Chu

Fawn Phelps

2021 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 10

Public Health and the healthcare industry are in an era of increasingly rapid change. The complexity of public health and health care issues, health care financing and operations, and intractable public health challenges call for leadership that is dynamic, thoughtful, and inclusive. Now more than ever, public health practitioners need to develop leadership skills that enable them to work across programmatic and systemic "silos" while engaging and working with diverse communities, topic experts, and other stakeholders.

DrPH 255 is a real-time dive into community-focused, public health interventions. This course integrates the development of leadership, problem solving, and teamwork skills within the completion of client-generated scopes of work. The course gives you an opportunity to get involved in the community and put your classroom theories to the test.

The course focuses on three key areas:

1. Working effectively in teams to produce a product as specified by community-focused client organizations.
2. Stakeholder engagement and cross-sector collaboration (e.g., clinicians, frontline health center and mental health staff, educators, community health workers, community organizations and residents).
3. Working effectively and authentically with diverse populations.

Strategic Management in Global Settings (205526)

William Bean

2020 Fall (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 40

"Strategic Management in Global Settings" will provide an overview of some of the key concepts and tools in strategic management that students will be able to draw upon throughout their careers as public health leaders. Topics will include competitive analysis, formulation and implementation of strategy, and strategic measurement and management of organizational performance. This is a case-based course and student

preparation and active participation is required. Cases will represent a diverse cross-section of health care organizations, and will include both US and global organizations. Cases will range from academic medical centers to government-owned hospitals, as well as ministries of health to non-governmental organizations (NGOs) to private health care corporations.

Strategic Management in Global Settings (205526)

William Bean

2018 Fall (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 55

"Strategic Management in Global Settings" will provide an overview of some of the key concepts and tools in strategic management that students will be able to draw upon throughout their careers as public health leaders. Topics will include competitive analysis, formulation and implementation of strategy, and strategic measurement and management of organizational performance. This is a case-based course and student preparation and active participation is required. Cases will represent a diverse cross-section of health care organizations, and will include both US and global organizations. Cases will range from academic medical centers to government-owned hospitals, as well as ministries of health to non-governmental organizations (NGOs) to private health care corporations.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | DRPH, New MPH45 HM, Continuing MPH65 HM

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/16/2018 01:00PM – 08/28/2018 11:59PM

DrPH Delta Doctoral Seminar (204411)

Peter Berman

Shaloo Puri

Jesse Bump

2017 Spring (1.25 Credits)

Schedule: W 0630 PM - 0830 PM
W 0630 PM - 0930 PM
W 0630 PM - 0930 PM
W 0630 PM - 0830 PM

Instructor Permissions: None

Enrollment Cap: 27

The DrPH DELTA Doctoral Project Seminar (D3PS) is required for all DrPH second year students. Its objective is to guide DrPH students through a structured and collaborative approach in support of their development of their third year DELTA Doctoral Project, culminating in presentation of a draft DELTA Doctoral Project approach and contents in the last part of the seminar.

The course consists of three parts. In the first part, in Fall 2, students will prepare for development of their DELTA Doctoral Project proposal through review of the goals, guidance, and outputs required of the project, and learn about approaches to development of scientific literature reviews and design of action plans tailored to organizational change. In addition to 8 hours of classroom time, students will each receive approximately one hour of individual advising on DELTA project development from the instructors. In the second phase, spanning the end of Fall 2 and the Winter Session, students will pursue individual experiential learning projects self-designed to support development of their DELTA Doctoral Projects either through specific new competency development/strengthening or through efforts to identify DELTA project partners. Students will spend approximately 2.5 weeks full-time on their Winter Session activities. At the end of Winter Session, students will submit a DELTA project prospectus describing their current thinking about their own DELTA project. (N.B.: This is not the DELTA project proposal which must be developed in collaboration with each student's Delta Project Committee but it is a step in that direction). The third phase, in Spring 1, will focus on the development of proposals, presentations, and presentation skills through a

combination of small group peer coaching and presentations and feedback in seminar plenary sessions. This will assist students to advance in their DELTA project planning and be better prepared for their Oral Qualifying Examinations. Classroom time scheduled in Spring 1 totals 12.5 hours because of three extended sessions to allow each student to present to the group.

Students will progress towards their DELTA project at different paces. At the end of the seminar, students will have advanced in their thinking about the doctoral projects including technical background, intended work plans, potential partner organizations, doctoral committee members, funding strategies, and timeline. They will have initiated or will be prepared to initiate work with doctoral committee chairs and members to write proposals and prepare for their oral qualifying examinations. Teaching methods in this course will include class discussion, readings, group work, team presentations, and collaborative critique from instructors and peers.

Note: This course will be scheduled as a Fall 2 (1.25 credits) and Spring 1 (1.25 credits) session. Students are required to register for both sections of the course for a total of 2.5 credits. The final grade will be received after the Spring 1 section is completed.

Class Notes: **The Spring 1 section of DRPH 290 includes a required experiential learning activity to be completed during the WinterSession. Please contact the DRPH Program Office for more information.**

Introduction to Environmental Health (190163)

Rose Goldman

Jonathan Buonocore

2016 Fall (2.5 Credits) **Schedule:** MW 1030 AM - 1220 PM

Instructor Permissions: None **Enrollment Cap:** 100

This course offers a general introduction to environmental health from local to global, addressing fundamental topics and current controversies. The first part of the course covers core topics that prepare students to more fully understand and address environmental health issues: toxicology, exposure assessment, environmental epidemiology, risk assessment/risk management, air pollution, water pollution, and environmental justice. Using the tools from the first part of the course, students then participate in sessions on occupational health, children's health and the environment, injuries, climate change and health, the built environment/urban sprawl, and debates concerning pesticide use.Students can actively engage with the course material through in-class and online, case discussions, debates, and review of environment-related current events. This course provides an excellent introductory foundation in environmental health for all professional master's degree candidates, whether or not specializing in environmental health. The course fulfills the environmental health requirement for all professional master's degree programs.

Activities: Brief graded written assignments (assigned written case analysis and pesticide debate position); final individual case project, in-class, on-line discussions and exercises.

Additional Course Attributes:

This course offers a general introduction to environmental health from local to global, addressing fundamental topics and current controversies. The first part of the course covers core topics that prepare students to more fully understand and address environmental health issues: toxicology, exposure assessment, environmental epidemiology, risk assessment/risk management, air pollution, water pollution, and environmental justice. Using the tools from the first part of the course, students then participate in sessions on occupational health, children's health and the environment, injuries, climate change and health, the built environment/urban sprawl, and debates concerning pesticide use.Students can actively engage with the course material through in-class and online, case discussions, debates, and review of environment-related current events. This course provides an excellent introductory foundation in environmental health for all professional master's degree candidates, whether or not specializing in environmental health. The course fulfills the environmental health requirement for all professional master's degree programs.

Activities: Brief graded written assignments (assigned written case analysis and pesticide debate position); final individual case project, in-class, on-line discussions and exercises.

Principles of Environmental Health (190166)

Douglas Dockery

2018 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 70

This course is appropriate for students interested in learning quantitative methods for assessing environmental exposures and hazards. This course is directed at first year Environmental Health students and MPH students with specific interest or experience in environmental health or for those students who have taken EH 201. Students who have taken EH 201 can take EH 202 as a sequel for more intensive training in environmental health. Students will learn methods for quantitative evaluation and public health responses to environmental hazards through lectures, problem solving, and case studies. The course is structured around specific tools including exposure assessment, epidemiology, toxicology and pathophysiology, risk assessment, life cycle analysis, and environmental policy.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Human Physiology (190168)

Nancy Long Sieber

2020 Fall (5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 68

As an introduction to the principles governing function in the human body, this course is designed to provide a framework in physiology for future public health researchers and professionals who have not taken college level physiology courses. Emphasis is placed on the concept of homeostasis and on integrative aspects of physiology. Examples of pathophysiology and environmental physiology will highlight these processes.

Course Activities: Problem sets, exams, laboratory.

Course Note: College-level introductory biology

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Social and Sustainable Innovation Driven by the Sustainable Development Goals (204420)

John Spengler

Ramon Sanchez Pina

2020 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 16

In January 1st of 2016 the United Nations officially released the 2030 Agenda for Sustainable Development which officially launched the 17 Sustainable Development Goals (SDGs) which over the next 15 years will drive global activities to end all forms of poverty, fight inequalities and reduce climate change. The new goals call for action for all countries to promote economic growth and address a range of social needs including education, health, social protection, and job opportunities, while tackling climate change and environmental protection (UN, 2016). Although SDGs are not legally binding, it is very likely that governments may use them to establish national frameworks for achieving these 17 goals which might trigger innovation at a global scale. However, the task of complying with SDGs should be a shared responsibility with citizens of each country as it is unlikely that governments would be able to act by themselves without people's support. A big percentage of new ideas are likely to be conceived and implemented in developing countries which may require to strengthen their frameworks and capacity to conceive and implement innovation initiatives under their local conditions. For that reason, public health professionals should become agents of change that empower people worldwide by sharing knowledge and

developing skills in sustainable practices and technologies, climate change preparedness, social entrepreneurship and the process of creating positive startups to implement sustainable and social innovation to help in achieving SDGs.

This course will examine the relationship between SDGs, community problems and current sustainable and social solutions to serve as a starting point for developing new solutions that might serve as the business or social cases for new startups in health, sustainability or social ventures.

This course will be taught in the Yucatan Peninsula in Mexico during January of 2017. Students from Harvard University will take classes along with students from the Autonomous University of Yucatan and will work in multi-national teams to assess community needs, prepare climate change vulnerability and resiliency enhancement plans, design health and social solutions to problems to serve as the business case for sustainable startups, develop business or social plans for potential investors, engage the community into participating in developing and implementing solutions and in recommending frameworks to enhance sustainable and social entrepreneurship in a community.

Some of the topics for this course are:

- Sustainable Development Goals as drivers of sustainable, health and social initiatives

- Assessment of health and environmental beneficence of new ideas to achieve SDGs based on scientific tools developed by public health professionals

- Assessment of community vulnerability and resiliency development to the effects of climate change

- The process of identifying and understanding community needs to engage people into participating in achieving the aims of SDGs

- The process of creating social, health or sustainability startups based on SDGs, community needs and climate change preparedness activities

- The process of using health and environmental benefits of sustainable or social value propositions to strengthen the business cases to help funding activities with innovation and social investors

Requirements: **HSPH: HSPH Degr + PHD Stu**

Food and the Global Environment (204507)

Gary Adamkiewicz

2021 Spring (2.5 Credits) **Schedule:** M 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 60

In this course, we will explore the development of our modern food production and distribution system and its effects on our environment and planet. To explore the opportunities for and challenges to achieving a sustainable food system, we will critically review published studies and other assessments that evaluate the environmental and social impact of food-related products and processes. The course will cover such topics as: agricultural and food policy, industrialization and "factory" farming, the interrelationship between climate change and food production, water quality and scarcity, the role of technology in food production and other relevant topics. The course will be taught through a series of lectures, case studies and readings that highlight recent research and trends. We will apply life cycle assessment concepts and appropriate sustainability criteria and benchmarking to current questions surrounding our global food system, and will incorporate observations from the developed and developing world. The course will emphasize the methodologies and skills needed to critically assess the sustainability of various food products and practices.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EH Department Students

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Introduction to Occupational and Environmental Medicine (190173)

David Rainey

Stefanos Kales

2021 Spring (2.5 Credits) **Schedule:** F 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 35

Overview of Occupational and Environmental Medicine including: the diagnosis and management of illnesses following exposure to specific workplace substances, environmental and community hazards, such as asbestos, lead, organic solvents, and vibration; methods of diagnosis of early organ system effects of chemicals and techniques for assessing impairment and disability; as well as, medicolegal aspects of occupational health.

Course Activities: Mid-term exam and Final exam.

Course Note: Basic course in toxicology recommended.

This is a clinical and preventive medicine course. The material is taught at a post-graduate level, and a medical or allied health background is required. The majority of students will be physicians, nurses,

dentists, pharmacists and students in those fields. Persons without prior biomedical training may NOT take the class for an ordinal grade. Such students are welcome to audit the class. In certain exceptions, if discussed with the instructors, such students may be granted permission by the instructors to take the course on a pass/fail basis.

Environmental Health 232 Section: 1

Introduction to Occupational and Environmental Medicine (190173)

Stefanos Kales

David Christiani

2018 Spring (2.5 Credits) **Schedule:** F 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 100

Overview of Occupational and Environmental Medicine including: the diagnosis and management of illnesses following exposure to specific workplace substances, environmental and community hazards, such as asbestos, lead, organic solvents, and vibration; methods of diagnosis of early organ system effects of chemicals and techniques for assessing impairment and disability; as well as, medicolegal aspects of occupational health.

Course Activities: Mid-term exam and Final exam.

Course Note: Basic course in toxicology recommended.

This is a clinical and preventive medicine course. The material is taught at a post-graduate level, and a medical or allied health background is required. The majority of students will be physicians, nurses, dentists, pharmacists and students in those fields. Persons without prior biomedical training may NOT take the class for an ordinal grade. Such students are welcome to audit the class. In certain exceptions, if discussed with the instructors, such students may be granted permission by the instructors to take the course on a pass/fail basis.

Class Notes: **Class will meet in FXB G11 on March 23rd.**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Epidemiology of Environmental & Occupational Health Regulations (190175)

Gregory Wagner

David Wegman

2021 Spring (5 Credits) **Schedule:** F 0945 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 16

Provides students with the opportunity to review the epidemiologic basis for associating selected occupational and environmental exposures with health outcomes and to explore how this science might be used to develop and implement regulation of these exposures. Class sessions are divided between a critical evaluation of the science and a thoughtful engagement with how the science can inform policy. Several sessions include guest experts who have worked at the interface of science and policy.

Course Activities: Discussions based on selected epidemiologic studies and potential policy to address each problem.

Course Note: Any EH course required as a pre-requisite or concurrent requisite.

2020 Fall (2.5 Credits) **Schedule:** R 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 28

This course in occupational safety works towards the prevention of work-related injury and illnesses through proactive management and control of workplace hazards. The primary objectives of the course are to: (1) identify fundamental workplace hazards, (2) develop a basis of basic government and voluntary regulations, (3) understand issues pertaining to specific and different industries, and (4) understand various safety management programs.

Course Activities: Lectures and group discussions, and a term project.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

2017 Fall (2.5 Credits) **Schedule:** W 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 17

Occupational ergonomics applies the fundamental science and theories of epidemiology, physiology, biomechanics, and psychology, to name a few, to the design and implementation of physical environments with the goal of optimizing system performance and human well-being. Within the public health framework,

ergonomics focuses on the prevention of work-related musculoskeletal disorders, injury and disability, especially those associates with lifting and repetitive tasks. Prevention efforts will focus on redesigning of sick jobs and a systematic and process approach to physical ergonomics programs.

Course Activities: Lectures and group discussions, and a term project analyzing a real world job.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Material Fee Tier	< $50
All: Cross Reg Availability	Available for Harvard Cross Registration

Environmental Health 243 Section: 1

Built Environment, Nature, and Health (213255)

Peter James

2020 Fall (2.5 Credits) **Schedule:** WF 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 30

The built environment – our homes, schools, businesses, streets and sidewalks, and transportation options – and the natural environment – features such as vegetation, water, parks, and open spaces – directly and indirectly impact health and well-being. The places where we live, learn, work, and play can determine our exposure to pollution, influence our health behaviors, and ultimately drive disease risk. The built and natural environment can contribute to health outcomes that are the major contributors to morbidity and mortality in the US, and increasingly globally. Moreover, decisions on how we have designed our built and natural environments are long-lasting and can disproportionately impact the health of individuals of varied ages, abilities, races, ethnicities, and socioeconomic levels. Through this course, participants will learn how to study the influence of built and natural environments on an array of health outcomes, receive a basic introduction to Geographic Information Systems (GIS) (no prior knowledge required), will learn to assess the evidence behind different associations observed in the literature, and will explore the policy and decision-making processes that facilitate built and natural environment changes.

Additional Course Attributes:

Public Health in Megacities: The Environmental Dimension (190180)

Enrique Cifuentes

Douglas Dockery

John Evans

2018 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 20

In 1992, the World Health Organization characterized Mexico City as the most polluted city in the world (World Health Organization, 1992 *Urban air pollution in megacities of the world*). In response, the academic community, public officials, and community members have worked diligently and have made excellent progress in understanding the sources and unique characteristics leading to these high air pollution levels, identifying and implementing control strategies, monitoring compliance, and measuring the improvements in air quality.

This course will introduce participants to the environmental callenges and social determinants of health of this city and the metroplitan area with a population of over 22 million. Integrating theory, case based discussions, field trips, and meetings with local public health and environmental professionals, policy makers, and researchers, students will gain an unique understanding of hte multi-faceted issues that need to be considered and integrated in relief and perhaps provide a blueprint for other such affected populations.

Requirements: **HSPH: HSPH Degr + PHD Stu**

High Performance Buildings for Health, Comfort and Sustainability (190181)

Joseph Allen

Jose Guillermo Cedeno Laurent

2021 Spring (5 Credits)		**Schedule:**	W 0800 AM - 1115 AM
Instructor Permissions:	None	**Enrollment Cap:**	12

It is well-known and oft-repeated in environmental health circles that we spend 90% of time indoors. Because this constitutes the vast majority of our exposure time, and concentrations of many indoor pollutants are actually higher indoors than outdoors, it follows logically that indoor environments influence our health. Buildings have the potential for both positive and negative impacts on this indoor exposure, and can mitigate the burden of outdoor pollutants indoors. Over 40 years of research on the indoor environment has yielded many insights into building-related factors that influence health, well-being, and productivity. To meet challenges related to energy and materials, while simultaneously providing healthy indoor environments, buildings must incorporate sustainability criteria into every aspect of design, construction and operation. By definition, green buildings focus on minimizing impacts to the environment through reductions in energy usage, water usage, and minimizing environmental disturbances from the building site. Also by definition, but perhaps less widely recognized, green buildings aim to improve human health through design of healthy indoor environments. This class will cover basic principles of high performance building design, construction and operation, and impacts on indoor environmental quality, including chemical exposures, light, noise and thermal comfort. One class each week will be dedicated to lectures on these topics, with case studies and experiences from building practitioners that have successfully incorporated sustainability features in historic and contemporary structures. We will also have guests from across the university (Harvard T.H. Chan School of Public Health, Graduate School of Design, Harvard Medical School, Harvard University Office of Sustainability). The concepts presented in lectures will be reinforced in the second class each week with field trips, advanced modeling seminars and hands-on measurements of indoor environmental parameters. This course will be a requirement for the planned MPH65 degree track program in Sustainability and Environmental Management.

Water Pollution (190186)

Ronnie Levin

2021 Spring (5 Credits)		**Schedule:**	TR 0945 AM - 1115 AM
Instructor Permissions:	None	**Enrollment Cap:**	68

This seminar course is designed to teach an understanding of the basic principles of water pollution and water pollution issues on local, regional and global scales. The course will begin with a discussion of the basic chemical, physical and biological properties of water and water contaminants. Subsequent lectures will cover specific chemical and biological contaminants in ground, surface, and marine waters; sources, fate, transport, and transformation of contaminants; monitoring techniques, water source protection and resource management; water and wastewater treatment; transmission of waterborne disease; toxicological concerns of chemicals in water, including disinfection byproducts; and interactions with the air and land environments. Invited lecturers will cover issues such as harmful algal blooms, groundwater modeling, coastal zone management, and US regulatory approaches and policies for aquatic ecosystem protection. Course Activities: Class discussions, homework assignments, exams and final project.

Course Activities: Class discussions, homework assignments, exams and final project.

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Water Pollution (190186)

Ronnie Levin

2020 Spring (5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 68

This seminar course is designed to teach an understanding of the basic principles of water pollution and water pollution issues on local, regional and global scales. The course will begin with a discussion of the basic

chemical, physical and biological properties of water and water contaminants. Subsequent lectures will cover specific chemical and biological contaminants in ground, surface, and marine waters; sources, fate, transport, and transformation of contaminants; monitoring techniques, water source protection and resource management; water and wastewater treatment; transmission of waterborne disease; toxicological concerns of chemicals in water, including disinfection byproducts; and interactions with the air and land environments. Invited lecturers will cover issues such as harmful algal blooms, groundwater modeling, coastal zone management, and US regulatory approaches and policies for aquatic ecosystem protection. Course Activities: Class discussions, homework assignments, exams and final project.

Course Activities: Class discussions, homework assignments, exams and final project.

Class Notes:	**THIS CLASS HAS PRIORITY ENROLLMENT** **Priority Wave Groups** **Wave 1 | EH Department Students** **Wave 2 | Open Enrollment** **Wave 3 | Open Enrollment** **----------** **Priority Wave Timing** **Wave 1 | 1/16/2020 01:00PM – 1/21/2020 11:59PM** **Wave 2 | 1/22/2020 12:00AM – 1/23/2020 11:59PM** **Wave 3 | 1/24/2020 12:00AM – Enrollment Deadline (varies by session)** **Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. Workplace Environmental Control for Established & Emerging Technologies (190188)

John Price

Victor Hillman

Louis DiBerardinis

Robert Herrick

2018 Spring (5 Credits) **Schedule:** R 0345 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 10

This course covers environmental control technology for protection of workers. The primary topics are industrial ventilation systems for the control of airborne contaminants and heat, respiratory protection, and methods for control of noise and vibration A significant portion of the course includes basic fundamentals needed to understand and apply environmental control technology. Case studies and field trips will be used to demonstrate that application of these fundamentals.

Class Notes: **This class will meet in Kresge 204 during Spring 1 and Kresge 201 during Spring 2.**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Edward Baker

2017 Fall (2.5 Credits) **Schedule:** R 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course will provide essential training for students in the development of the management skills and knowledge necessary for environmental health and safety professional to assess, develop, implement, and manage change in organizations in response to environmental health and safety challenges. Additionally, the course will focus on the distinctive issues surrounding the introduction of new and/or emerging technologies into organizations. Through the use of real-world case studies, students will work in interactive teams as they develop their understanding of the multi-faceted aspects of these issues.

Introduction to the Work Environment (190190)

Robert Herrick

Diana Ceballos Ochoa

2017 Fall (2.5 Credits) **Schedule:** M 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 25

The course comprises introductory lectures and discussions on key aspects of industrial hygiene and occupational health covering recognition, evaluation and control of health hazards at work. Consideration is given to chemical, physical and biological hazards, and the criteria for the evaluation of each.

Course Activities: Written projects, class discussions, demonstrations.

Course Note: While intended primarily for students planning a career in occupational health, this course provides background to the subject for students studying environmental issues and is strongly recommended for students intending to take ID263.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Analytical Methods and Exposure Assessment (190191)

Gary Adamkiewicz

Jaime Hart

2021 Spring (5 Credits)		**Schedule:**	MT 0530 PM - 0700 PM
Instructor Permissions:	None	**Enrollment Cap:**	30

This course will examine methodological issues associated with the design and execution of studies designed to measure environmental exposure to chemical and biological contaminants. The first half of the course will be lecture based, and will address topics such as: study design issues, implementation of quality control/ quality assurance programs, data analysis, protocols for sampling air, water, sediments, and soil for contaminants of concern, and analytical techniques used to measure chemical and biological constituents in the laboratory. During the second half of the semester, groups of students will design and execute their own field investigation using these techniques. The design and results of these projects are presented in class.

Course Activities: Lectures, written reports, problem sets, exams, class presentations, field work and final paper.
Course restricted: Environmental Health students (or instructor permission)

Instructor Permissions: None **Enrollment Cap:** 25

This course will examine methodological issues associated with the design and execution of studies designed to measure environmental exposure to chemical and biological contaminants. The first half of the course will be lecture based, and will address topics such as: study design issues, implementation of quality control/ quality assurance programs, data analysis, protocols for sampling air, water, sediments, and soil for contaminants of concern, and analytical techniques used to measure chemical and biological constituents in the laboratory. During the second half of the semester, groups of students will design and execute their own field investigation using these techniques. The design and results of these projects are presented in class.

Course Activities: Lectures, written reports, problem sets, exams, class presentations, field work and final paper.
Course restricted: Environmental Health SD and SM students in Exposure, Epidemiology, and Risk only (or instructor permission)

Additional Course Attributes:

Practice and Culminating Experience in Environmental Health (190195)

Robert Herrick

Francine Laden

2017 Fall (2.5 Credits) **Schedule:** F 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 17

This course is required for MPH65 students in Environmental Health. Students are required to prepare their own report, peer-review others and present the results.

Course Activities: Students present seminars on their recent internship or research projects.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Industrial Hygiene/Ergonomics Internship & Environmental Sciences Research Seminar (190195)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 25

Material for this course is required for Industrial Hygiene and Ergonomics concentrators doing the Internship Program and for Exposure, Epidemiology and Risk Program students doing research. The objective of the course is to refine communication skills. Students are required to prepare their own report, peer-review others and present the results.

Course Activities: Students present seminars on their recent internship or research projects.

Additional Course Attributes:

Environmental Health 268 Section: 1

Principles and Practices of Leadership for Environmental and Occupational Health Professionals (208067)

Edward Baker

Louis DiBerardinis

2020 Fall (2.5 Credits) **Schedule:** M 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 20

The course is designed to provide environmental and occupational health professionals with a conceptual foundation regarding the guiding principles and best practices of effective leadership and management in organizations. Using textbook readings, published articles, case studies, and online leader interviews, students will learn research-based theory and the application of theory to practice. Students will also complete leadership style self-assessments and join classmates in an online blog forum before class sessions. Class sessions will consist of very limited presentation of content with most class time allocated to a facilitated conversation designed to stimulate reflection on readings, interviews, work experiences, and blogposts. A final component will include development and presentation of each student's personal leadership framework, based on their selection of theories and practices, which is designed to serve as a guide to future leadership practice and development.

Exposure Assessment for Environmental & Occupational Epidemiology (190196)

Thomas Smith

2017 Spring (2.5 Credits) **Schedule:** M 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 30

Reviews the methods used to characterize environmental and occupational exposures. Presents approaches for biologically based exposure assessment matched to epidemiologic designs. Emphasizes evaluation of scientific literature.

Course Activities: Students will critique 4 case study papers. Instructors will provide feedback.

Course Note: Course recommended for doctoral students in environmental epidemiology.

Additional Course Attributes:

Industrial Hygiene/Ergonomics Internship (190199)

Instructor TBD

2015 Fall (20 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

The student works in an industrial or similar workplace under the direction of a qualified and experienced industrial hygienist or ergonomist (a mentor.) Generally the first half of the six-month period is devoted to learning evaluation techniques (e.g. personal air sampling, direct reading instrumentation, ventilation measurements,) and the second half to studying some specific hazard or problem in depth, and preparing material for presentation in the succeeding course, EH267.

Course Note: Completion of the first year of the two-year masters degree program in Industrial Hygiene required.

Additional Course Attributes:

Attribute	Value(s)

Environmental Health 278 Section: 1

Human Health and Global Environmental Change (190204)

Aaron Bernstein

Jonathan Buonocore

2021 Spring (2.5 Credits)		**Schedule:**	TR 0200 PM - 0330 PM
Instructor Permissions:	None	**Enrollment Cap:**	64

Human activity is changing the atmosphere and altering terrestrial marine ecosystems on a global scale. Evidence is mounting that these changes may already be having serious effects on human health, and there is growing concern that in coming decades the effects could be catastrophic. This course was developed because the practice of public health in this century will require an understanding of the relationship between human health and the global environment. It will provide an overview of climate change and biodiversity loss, two key examples of global environmental change, their potential consequences for human health, and explore solutions to these problems and the challenges inherent in realizing those solutions. The course will be open to all students at Harvard University, but enrollment is limited and preference will be given to students from Harvard Medical School, the Harvard School of Public Health, the Kennedy School of government, and to undergraduate Environmental Science Public Policy majors.

The course is jointly offered with Harvard Medical School and the Harvard Extension School. Students from these schools, and other schools, will also be part of the class.

Human Health and Global Environmental Change (190204)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 65

Human activity has changed the atmosphere and altered terrestrial and marine ecosystems on a global scale for the first time in history. Evidence is mounting that these changes may already be having serious effects on human health, and there is growing concern that in coming decades the effects could be catastrophic. This course will examine in detail climate change and biodiversity loss as two primary examples of global environmental change and their human health dimensions. The challenges of addressing global environmental problems from a public policy and communications standpoint will also be explored. A multi-disciplinary faculty will provide an integrated assessment of these issues. The course will be open to all students at Harvard University, but preference will be given to students from HSPH, HMS, and KSG, as well as to Environmental Science Public Policy majors in the Faculty of Arts and Sciences.

Radiation Environment: Its Identification, Evaluation & Control (190205)

Edward Maher

2017 Fall (2.5 Credits) **Schedule:** M 0200 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 15

Starting with the fundamentals of radiation protection, this course then treats in-depth selected topics in occupational and environmental radiation protection (e.g. risk assessment of exposures to diagnostic and therapeutic x rays; use of lung and metabolic models in evaluation of the hazard from inhalation and ingestion of radioactive chemicals; hazard from indoor radon; radiological assessments regarding nuclear power, war, and radiological terrorism; hazards from microwaves, cellular phones and other sources of nonionizing radiation; case studies of radiation accidents; management of university and hospital radiation programs). The course has been developed with the needs of students enrolled in environmental science and engineering, occupational health and the MPH program in mind.

Course Activities: Class discussions, homework assignments. Students will prepare a term position paper and oral presentation defending their stand on a controversial subject of their choice in a form suitable for consideration by management.

Requirements: **HSPH: HSPH Degr + PHD Stu**

The course has been developed with the needs of students enrolled in environmental science and engineering, occupational health and the MPH program in mind.

Course Activities: Class discussions, homework assignments. Students will prepare a term position paper and oral presentation defending their stand on a controversial subject of their choice in a form suitable for consideration by management.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EH Degree Students

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/16/2018 01:00PM – 08/28/2018 11:59PM

Wave 2 | 08/29/2018 12:00AM – 08/30/2018 11:59PM

Wave 3 | 08/31/2018 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled in the course (pending no time conflicts)

*****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course***

Requirements: **HSPH: HSPH Degr + PHD Stu**

Environmental Health 279 Section: 1

Radiation Environment: Its Identification, Evaluation & Control (190205)

Instructor TBD

2012 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 15

Starting with the fundamentals of radiation protection, this course then treats in-depth selected topics in occupational and environmental radiation protection (e.g. risk assessment of exposures to diagnostic and therapeutic x rays; use of lung and metabolic models in evaluation of the hazard from inhalation and ingestion of radioactive chemicals; hazard from indoor radon; radiological assessments regarding nuclear power, war, and radiological terrorism; hazards from microwaves, cellular phones and other sources of nonionizing radiation; case studies of radiation accidents; management of university and hospital radiation programs). The course has been developed with the needs of students enrolled in environmental science and engineering, occupational health and the MPH program in mind.

Course Activities: Class discussions, homework assignments. Students will prepare a term position paper and oral presentation defending their stand on a controversial subject of their choice in a form suitable for consideration by management.

Injury Epidemiology and Prevention (190208)

David Lombardi

2017 Spring (2.5 Credits) **Schedule:** F 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 32

This course will focus on injury as an important public health problem and the use of epidemiological methods to study and prevent injuries. Topics covered include theoretical concepts, the history of injury research, surveillance systems, analytic studies, measuring exposures and outcomes, and intervention and counter-measure approaches. Injury categories will focus on occupational and non-occupational contexts, and intentional and non-intentional sources of injuries.

Additional Course Attributes:

Occupational Biomechanics (190214)

Instructor TBD

2016 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

This course is a presentation of the anatomical and physiological basis for understanding and predicting human motor capabilities and limitations in the occupational setting. Quantitative models are developed to explain muscle strength performance, physical fatigue, and acute and chronic musculoskeletal trauma to the low back and upper extremities. Particular emphasis will be placed on the evaluation and design of manual activities in various occupations. The course will be organized for discussion-based learning. Students are expected to attend all classes and participate in the discussions. There will be extensive work in quantitative modeling, both in class and through homework problems.

Additional Course Attributes:

Atmospheric Environment (190215)

Petros Koutrakis

Steven Hanna

2021 Spring (5 Credits) **Schedule:** WF 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course offers a comprehensive overview of gaseous and particulate air pollutants. It will emphasize pollutant sources, physical and chemical properties, sampling and analysis, chemical transformation, atmospheric transport, fate, and potential for adverse health and environmental impacts. It will examine regulatory efforts to protect environmental health and emission control technologies for mobile and stationary sources, Lectures will present case studies on air pollution studies in US and other courses. Students will also learn to apply positive matrix factorization (PMF) to air pollution data and how to model pollutant dispersion using the AERMOD modeling system. In addition to mid-term and final examinations, the class includes several homework assignments and computer laboratories.

Environmental Epigenetics (190216)

Bernardo Lemos

2021 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 25

Epigenetics is a fast changing field, with increasing applicability in toxicology, epidemiology, population, and environmental studies. Epigenetic changes are reversible, responsive to environmental influences, and can have downstream effects as profound as those exerted by DNA mutations. The course will focus on epigenetic mechanisms leading to alterations in chromatin structure that can stably and heritably influence gene expression and methods to measure epigenetic attributes (DNA methylation, histone modifications, small non-coding RNAs, etc). Basic, toxicological, and epidemiology studies will be discussed to introduce the students to epigenetic changes in prenatial/early and adult life, and examine the impact of pollutants, and diet. The course will enable students to understand epigenetics and apply it to problems as varied as those pertaining to cardiovascular and respiratory disease, aging, reproductive health, inflammation/immunity, and cancer.

Epigenetics is a fast changing field, with increasing applicability in toxicology, epidemiology, population, and environmental studies. Epigenetic changes are reversible, responsive to environmental influences, and can have downstream effects as profound as those exerted by DNA mutations. The course will focus on epigenetic mechanisms leading to alterations in chromatin structure that can stably and heritably influence gene expression and methods to measure epigenetic attributes (DNA methylation, histone modifications,

small non-coding RNAs, etc). Basic, toxicological, and epidemiology studies will be discussed to introduce the students to epigenetic changes in prenatial/early and adult life, and examine the impact of pollutants, and diet. The course will enable students to understand epigenetics and apply it to problems as varied as those pertaining to cardiovascular and respiratory disease, aging, reproductive health, inflammation/immunity, and cancer.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Environmental Epigenetics (190216)

Bernardo Lemos

2019 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 25

Epigenetics is a fast changing field, with increasing applicability in toxicology, epidemiology, population, and environmental studies. Epigenetic changes are reversible, responsive to environmental influences, and can have downstream effects as profound as those exerted by DNA mutations. The course will focus on epigenetic mechanisms leading to alterations in chromatin structure that can stably and heritably influence gene expression and methods to measure epigenetic attributes (DNA methylation, histone modifications, small non-coding RNAs, etc). Basic, toxicological, and epidemiology studies will be discussed to introduce the students to epigenetic changes in prenatial/early and adult life, and examine the impact of pollutants, and diet. The course will enable students to understand epigenetics and apply it to problems as varied as those pertaining to cardiovascular and respiratory disease, aging, reproductive health, inflammation/immunity, and cancer.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EH Department Students

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/10/2019 01:00PM – 1/15/2019 11:59PM

Wave 2 | 1/16/2019 12:00AM – 1/17/2019 11:59PM

Wave 3 | 1/18/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any

time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Environmental Epigenetics (190216)

Bernardo Lemos

2017 Spring (2.5 Credits) **Schedule:** TR 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 25

Epigenetics is a fast changing field, with increasing applicability in toxicology, epidemiology, population, and environmental studies. Epigenetic changes are reversible, responsive to environmental influences, and can have downstream effects as profound as those exerted by DNA mutations. The course will focus on epigenetic mechanisms leading to alterations in chromatin structure that can stably and heritably influence gene expression and methods to measure epigenetic attributes (DNA methylation, histone modifications, small non-coding RNAs, etc). Basic, toxicological, and epidemiology studies will be discussed to introduce the students to epigenetic changes in prenatial/early and adult life, and examine the impact of pollutants, and diet. The course will enable students to understand epigenetics and apply it to problems as varied as those pertaining to cardiovascular and respiratory disease, aging, reproductive health, inflammation/immunity, and cancer.

Class Notes: **Course Meeting Locations: Course will meet in the EPI Library, Kresge 907 on all meetings except 4/4, 4/27, and 5/2. On 4/4, 4/27, and 5/2 the class will meet in the EH conference room 1302.**

Environmental Epigenetics (190216)

Instructor TBD

2015 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 37

Epigenetics is a fast growing field, with increasing applicability in environmental and epidemiology studies,

focusing on the alterations in chromatin structure that can stably and heritably influence gene expression. Epigenetic changes can be as profound as those exerted by mutation, but, unlike mutations, are reversible and responsive to environmental influences. The course will focus on epigenetic mechanisms and laboratory methods for DNA methylamine, his tone modifications, small non-coding RNAs, and epigenomics. Ongoing experimental, and epidemiology studies (cohort, case-control, cross-sectional and repeated measurement studies) will be presented to introduce the students to the epigenetic effects in prenatal/early and adult life of environmental factors, including air pollution, metals, pesticides, benzene, PCBs, persistent organic pollutants, and diet. The course will enable them to understand and apply epigenetic methods in multiple areas, including cardiovascular and respiratory disease, aging, reproductive health, inflammation/immunity, and cancer.

Environmental Health 300 Section: 105

Independent Study (190217)

Bernardo Lemos

2019 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological

health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Additional Course Attributes:

2019 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Additional Course Attributes:

Independent Study (190217)

Tamarra James-Todd

2019 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the

regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Independent Study (190217)

Instructor TBD

2016 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 1

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Independent Study (190217)

Gary Adamkiewicz

2018 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Additional Course Attributes:

Independent Study (190217)

Douglas Dockery

2020 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Environmental Health 300 Section: 21

Independent Study (190217)

Jeffrey Fredberg

2016 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Additional Course Attributes:

Environmental Health 300 Section: 3

Independent Study (190217)

John Briscoe

2019 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
HSPH: Indpt. Study / Research	YES

Environmental Health 300 Section: 3

Independent Study (190217)

Andrea Baccarelli

2019 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Independent Study (190217)

Quan Lu

2019 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological

health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Additional Course Attributes:
